ex) ID=5	on	off	on	off	off	off	off	off
ex) ID=10	off	on	off	on	off	off	off	off

- The range of ID is 0~255. Factory default of Camera ID is 1.
- If you want to control a certain camera, you must match the camera ID with Cam ID setting of DVR or Controller.

### □ Communication Protocol Setup

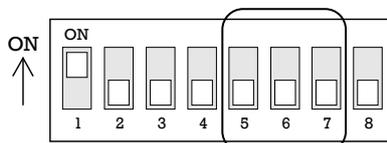

- Select the appropriate Protocol with DIP switch combination.

Switch State				Protocol
Pin1	Pin2	Pin3	Pin4

### □ RS-485 Termination Resistor

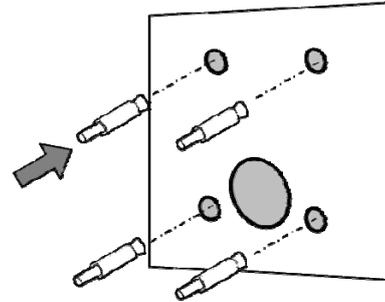

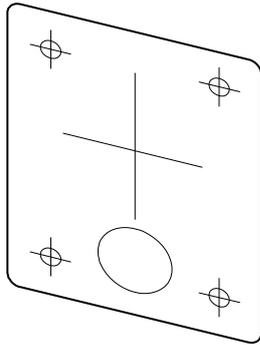

- Pin 8 is used for ON/OFF of RS-485 Termination. Normally, it must be OFF state. Especially when you have trouble with long Daisy chain style connection, turn ON this termination switch of last camera.

⊙ Pin 8 RS-485 Termination Resistor (On/Off)

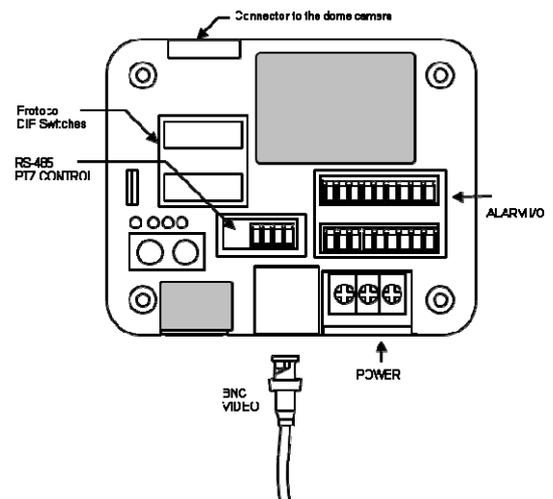

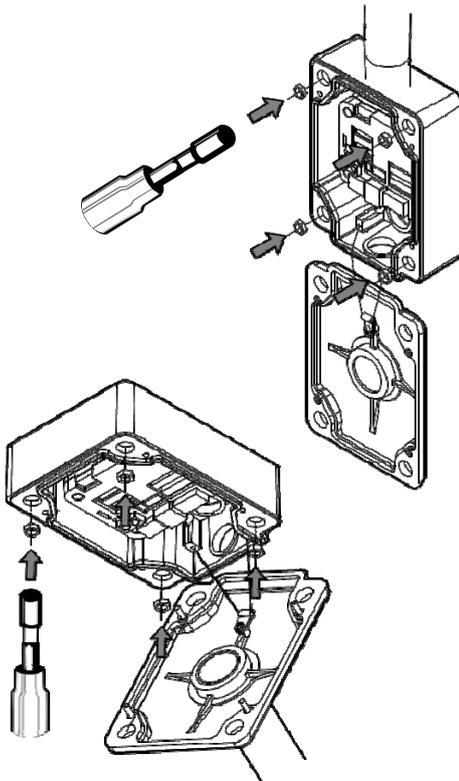

### Installation using Wall Mount Bracket

- ① Using the paper template, mark the holes on the wall.
- ② After drilling the holes, fix the four anchor bolts into the holes.

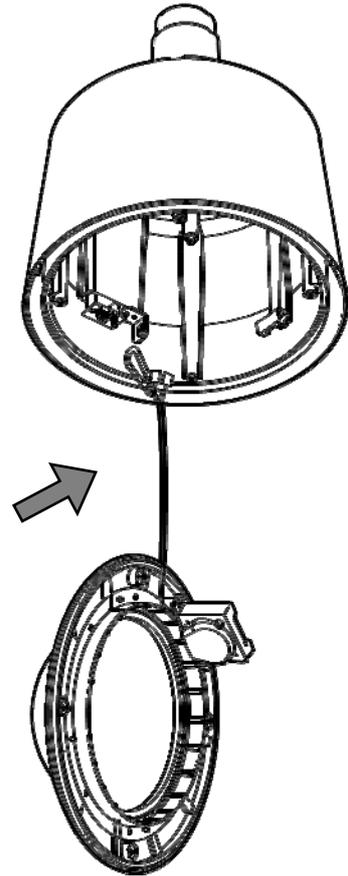

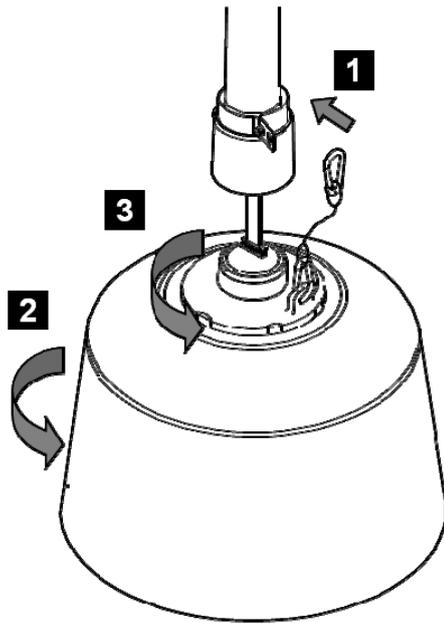

- ③ After locating the wall mount bracket on the anchor bolts properly. Tighten the nuts for anchor bolts
- ④ Connect cables to terminal blocks and BNC in the inner box of junction box. See the cabling in the next section.

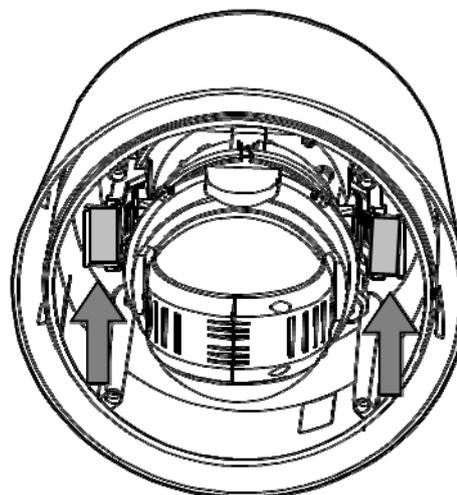

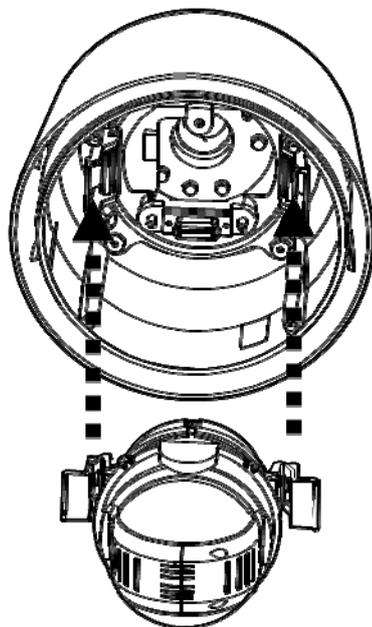

- ⑤ After hooking the safety cable on the hole of pipe [1], attach the upper housing to wall mount bracket by turning it at least seven turns [2]. To fix the upper body orientation, turn the handle of double nuts to clockwise tightly [3].
- ⑥ Open the dome cover to install the PTZ camera mechanism. Care must be taken dome cover is hung by internal safety cable properly. Plug fan/heater cables into the connectors in the housing.

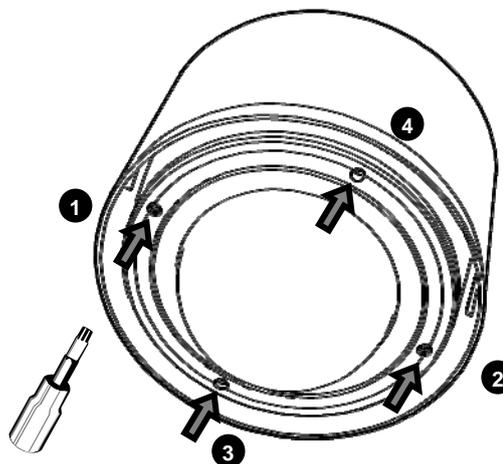

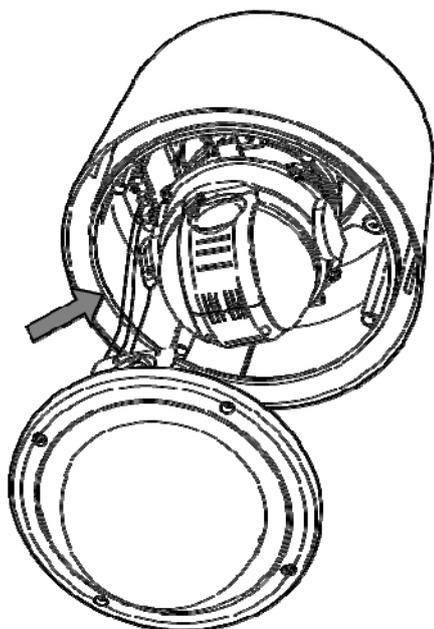

- ⑦ Plug the connector of cable from junction box into properly. After checking the orientation of one touch connector in the upper housing, press the PTZ mechanism into hook in the upper housing.
- ⑧ To lock the PTZ mechanism to the upper housing, press the two black handles till it sounds snap.

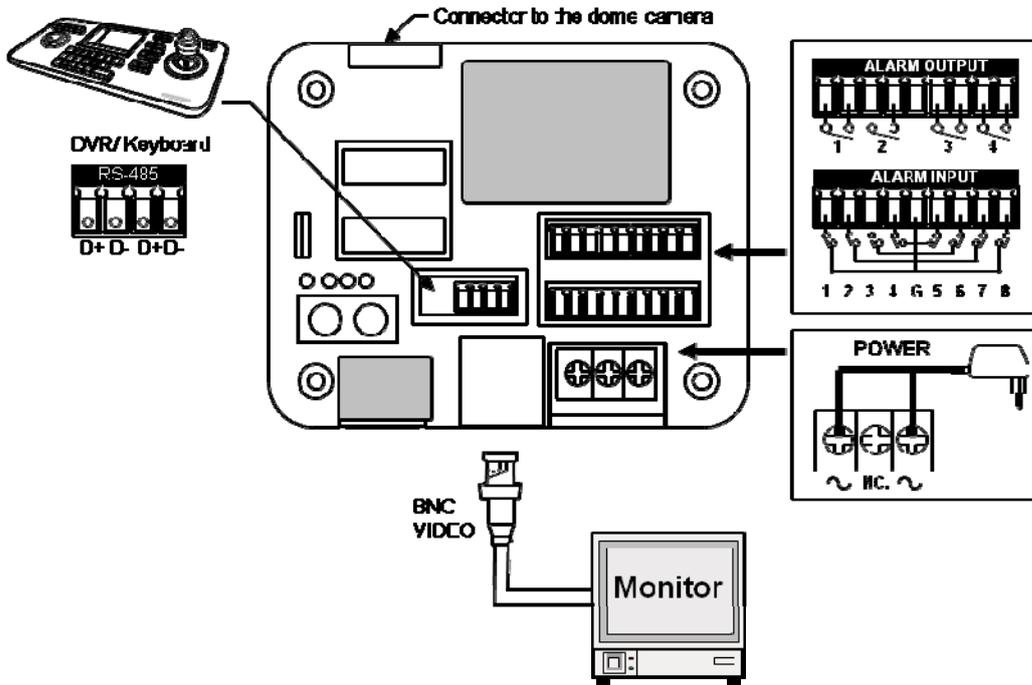

- ⑨ Close the dome cover. Care must be taken to locate dome cover by matching the "Arrow" mark.
- ⑩ Tighten four screws on the dome cover in sequence as shown in the picture bellow.

⚡ To maintain the best sealing, the torque of each screw must be in the range between  $0.5 \sim 1.0 \text{ N}\cdot\text{m}$  ( $0.37 \sim 0.73 \text{ lbf}\cdot\text{ft}$ ).

Cabling

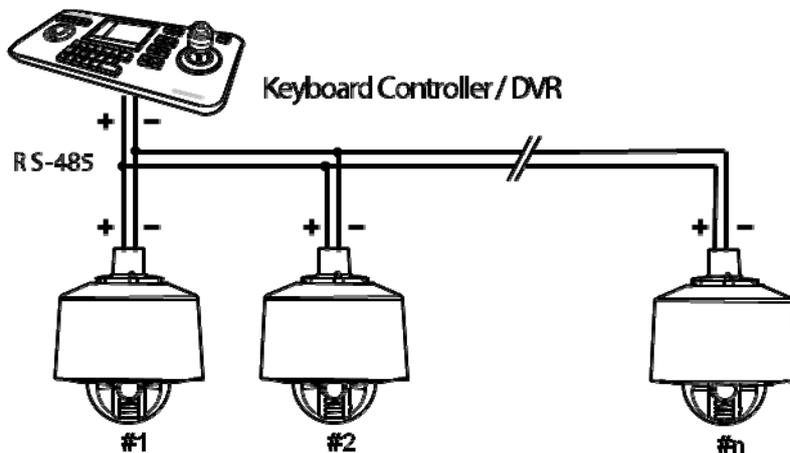

Power Connection

- Please, check the voltage and current capacity of rated power carefully. Rated power is indicated in the back of main unit.

Rated Power	Input Voltage Range	Current Consumption
AC 24V	AC 19V ~29V	2.5 A

RS-485 Communication

- For PTZ control, connect this line to keyboard and DVR. To control multiple cameras at the same time, RS-485 communication lines of them is connected in parallel as shown below.

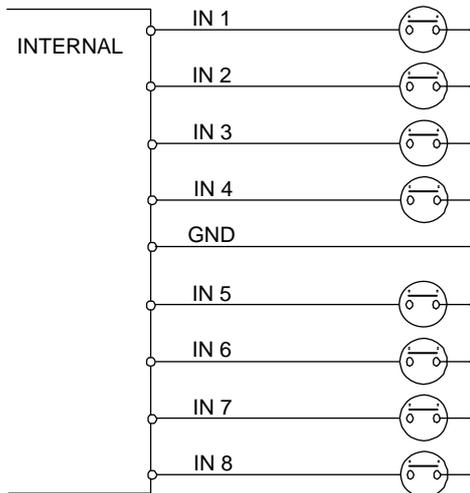

❑ Video Connection

- Connect with BNC coaxial cable.

❑ Alarm Input Connection

- Sensor Input

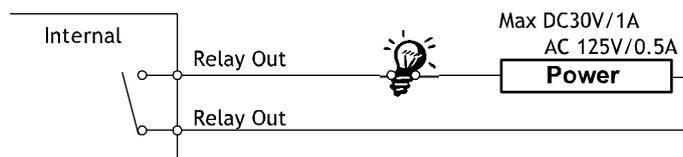

⌘ It is noted that short circuit between GND and Input pin means alarm activation.

If you want to use Alarm Input, the types of sensor must be selected in OSD menu. The sensor types are Normal Open and Normal Close. If sensor type is not selected properly, the alarm can be activated reversely.

⊙ Normal Open (N.O)	Output Voltage is high state when sensor is activated
⊙ Normal Close(N.C)	Output Voltage is high state when sensor is not activated

- Alarm Output

There are 4 Alarm Outputs and all of them are Relay contact type. Therefore, you do not have to care about polarity, AC/DC, and isolations between channels. Care must be taken for the power capacity of relay contact written above.

### Check points before operation

- Before power is applied, please check the cables carefully.
- The camera ID of the controller must be identical to that of the camera to be controlled. The camera ID can be checked in the System Information of OSD Menu.
- If your controller supports multi-protocols, the protocol must be changed to match to that of the camera.
- If you changed camera protocol by changing DIP switch, the change will be effective after you reboot the camera.
- Since the operation method can be different for each controller available, refer to the manual for your controller if camera can not be controlled properly.

### Preset and Pattern Function Pre-Check

- Check how to operate Preset, Group, Scan and Pattern function with controller or DVR in advance to operate camera function using them. (refer to your System keyboard Manual)
- If controller or DVR has no pattern button or function, use shortcut keys with preset numbers. For more information, refer to "Reserved Preset" in this manual.

## CAMERA SETUP

Setup the general functions of zoom camera module

● Focus Mode [AUTO/MANUAL/SEMIAUTO]

Sets camera focus mode.

○ SEMIAUTO Mode

This mode exchanges focus mode automatically between Manual Focus mode and Auto Focus mode. Manual Focus mode activates in preset operation and Auto Focus mode activates when jog operation starts.

With Manual mode at presets, Focus data is memorized in each preset in advance and camera calls focus data in correspondence with presets as soon as camera arrives at a preset.

● Digital Zoom [ON/OFF]

Sets digital zoom function to ON/OFF. If this is set to OFF, optical zoom function runs but zoom function stops at the end of optical zoom magnification.

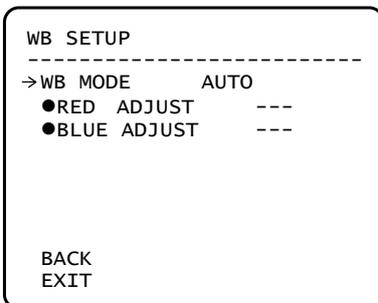

● Image Flip [ON/OFF]

To display Upside down image.

● Flickerless [ON/OFF]

Turn on or off the Flickerless function. In this function, AE mode becomes Shutter Priority mode and shutter speed value will be fixed to 1/100 sec.

□ White Balance Setup

● WB Mode [AUTO/MANUAL]

In Manual mode, Red and Blue level can be set up manually

● Red Adjust [0~255]

● Blue Adjust [0~255]

HOME position means the origin of PAN angle calculation. The value of PAN angle displayed on the screen is based on this HOME position.

By using Joystick, move the camera to the desired position and press ENTER (NEAR/SAVE).

It is noted that Home is not effective to Tilt angle.

If you change the location of Home position, all horizontal locations of functions such as preset, pattern, Group, Scan, and privacy zone mask will be shifted based on changed Home position.

- SET NORTH DIRECTION

You can set up North direction.

By using Joystick, move the camera to the desired NORTH position and press ENTER (NEAR/SAVE).

The direction will be displayed in the screen

[PAN AXIS / TILT AXIS / ZOOM / DD]

DD is direction and will be displayed from:

N/NE/E/SE/S/SW/W/NW

You can select a preferred Language of OSD display from 7 choices.

[ENGLISH/ESPAÑOL/FRANÇAIS/DEUTSCH/ITALIANO /РУССКИЙ/PORTUGUÊS]

After selecting a language, press Enter(NEAR) key.

### TIP: Set Home Position

When you replace the camera block or the orientation of camera is changed due to maintenance operations, it is very difficult to maintain same pan orientation. Therefore, all function data depending on pan orientation such as preset, pattern, Group, Scan, and privacy zone mask are not useful any more accordingly. However, even in this case, you can reuse the data if you redefine **Set Home Position** on the previous Home position. It is recommendable to memorize the target scene of current Home position.
